

WINGS Group Trade Marketing Performance Analysis

Data Cleaning Report

This report summarizes data quality issues identified during the EDA and validation process and the cleaning solutions applied before PostgreSQL integration, SQL analysis, and Power BI dashboard development.

Dataset	Data Issue	Affected Column	Cleaning Solution
fact_sales	Incorrect data type	gross_sales	Converted object type to numeric
dim_date	Incorrect data type	date	Converted object type to datetime
fact_promotion	Incorrect data type	start_date, end_date	Converted object type to datetime
fact_digital_campaign	Incorrect data type	start_date, end_date	Converted object type to datetime
fact_promotion	Inconsistent SKU format	sku_id	Standardized SKU_ID format to uppercase
fact_digital_campaign	Inconsistent SKU format	sku_id	Standardized SKU_ID format to uppercase
fact_sales	SKU_ID mismatch with product master	sku_id	Mapped SKU_ID based on dim_product master format
fact_sales	Missing values	outlet_id, quantity, discount	Removed invalid records and filled discount with 0
fact_promotion	Missing values	discount_percentage, promo_budget	Filled missing values with 0
fact_digital_campaign	Missing values	clicks, ctr	Filled clicks with 0 and recalculated CTR
fact_sales	Duplicate transaction records	transaction_id	Removed duplicate transactions and retained unique records

Cleaning Outcome

The dataset has been cleaned, standardized, and validated. The final dataset is ready for PostgreSQL integration, SQL business analysis, and Power BI dashboard development.
